CLAIMS

1. A robot toy, comprising:

a control unit formed by a portion of a body,

wherein a form is changed by controlling the control unit, and a different movement is performed before and after the form change.

2. The robot toy as claimed in claim 1, wherein a leg forms the control unit, and a standing posture and a forward bent posture are taken according to a control by the control unit.

3. The robot toy as claimed in claim 1 or 2, wherein one toy component is arranged on a link facing a frame in a four-section link, the other toy component is arranged on one of swinging links facing each other, the one of the swinging links extending to an opposite side with respect to the frame and a tip thereof rotatably and swingably engaging with a rotating disk at an eccentric position, and both toy components are rotated and perform opening and closing movements with each other by rotating the rotating disk, before or after the form change.

4. The robot toy as claimed in claim 3, wherein the frame is arranged in a trunk portion, the one toy component is a lower jaw, and the other toy component is an upper jaw.

5. A drive device for a toy, wherein one toy component

is arranged on a link facing a frame in a four-section link, the other toy component is arranged on one of swinging links facing each other, the one of the swinging links extending to an opposite side with respect to the frame and a tip thereof rotatably and swingably engaging with a rotating disk at an eccentric position, and both toy components are rotated and perform open and close movements with each other by rotating the rotating disk, before or after the form change.
